

OPEN 1st terminal

```
sudo service hbase_master start
```

```
sudo service hbase_regionserver start
```

```
hbase shell
```

```
create 'employee', 'personal', 'professional'
```

```
list
```

```
scan 'employee'
```

```
put 'employee', '1', 'personal:name', 'Ashish'
```

```
put 'employee', '1', 'personal:age', '21'
```

```
put 'employee', '1', 'professional:salary', '53000'
```

```
put 'employee', '1', 'professional:dept', 'IT'
```

```
scan 'employee'
```

2nd TERMINAL

```
hive
```

```
create external table employee_hbase(key string,name string,age string,salary string,dept string)
```

```
stored by 'org.apache.hadoop.hive.hbase.HBaseStorageHandler'
```

```
with serdeproperties
```

```
("hbase.columns.mapping"=":key,personal:name,personal:age,professional:dept,professional:salary"  
)
```

```
tblproperties("hbase.table.name"="employee")
```

```
select * from employee_hbase;
```

```
insert into table employee_hbase values('4','abc','45','20000','Admin');
```

1st TERMINAL

```
scan 'employee'
```

```
put 'employee','5','personal:name','xyz'
```
